

Reeds

Bases powered by:
LED (IP67) or
Fiber optics (IP68)

REED SYSTEM

The AFO reed system comprises nine models, manufactured from technical polymers or carbon fiber, to add interest points in gardens, ponds, artificial lakes and landscaping. Reeds can be supplied as a standard in heights of up to two meters. On request we can produce custom reeds in any size or shape, subject to the technical constraints of the materials used.

All reeds are passive elements, which must be connected to a base powered by LED (IP67) or fiber optics (IP68).

BASES

The AFO IP67 LED bases power single reeds (DWF 410) or groups of three (DWF 610). The bases can be installed on hard floors or soft earth and can be grouped with their IP68 connectors. These bases house CREE LED and electronic drivers powered at 12VAC. Standard color temperatures are 3000°K and 6000°K. On request we can install red, amber, blue or yellow LED.

The fiber optics reed systems comprise reeds, fiber, illuminator and anchors. These fiber systems are much more flexible and practically devoid of maintenance. Fiber reeds are IP68 and a single illuminator can power many reeds with RGB or color change options.

DWF 410 for one reed

DWF 610 for three reeds

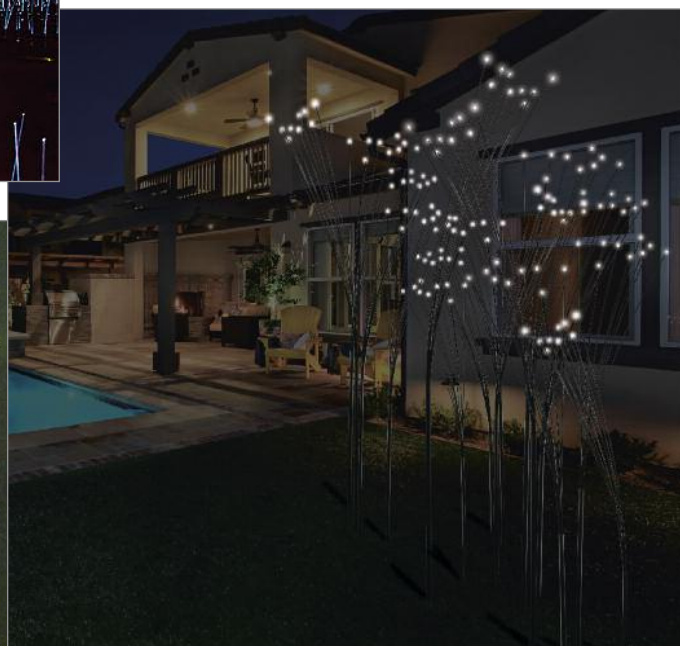

Illuminator + Fiber Optics
